

# CHAPTER 4: MEASUREMENT

# THEOREM OF PYTHAGORAS

In a right-angled triangle, the sum of the two sides squared equals the hypotenuse squared.

$$\begin{aligned} &(\text{hypotenuse})^2 \\ &= (\text{side})^2 + (\text{side})^2 \\ &= (3)^2 + (4)^2 \\ &= (5)^2 \end{aligned}$$

# THEOREM OF PYTHAGORAS

Introduction to the Theorem of  
Pythagoras

Pythagorean Problems

# EXERCISE!

Solve for x:

1.

2.

# PERIMETER

Introduction to Perimeter

Understanding Perimeter

# PERIMETER

**Square:**

$$P = 4 \times \text{side}$$

$$\text{Side} = 6\text{mm}$$

$$\begin{aligned} \therefore P &= 4 \times 6 \\ &= 24\text{mm} \end{aligned}$$

**Rectangle:**

$$P = 2l + 2b = 2(l + b)$$

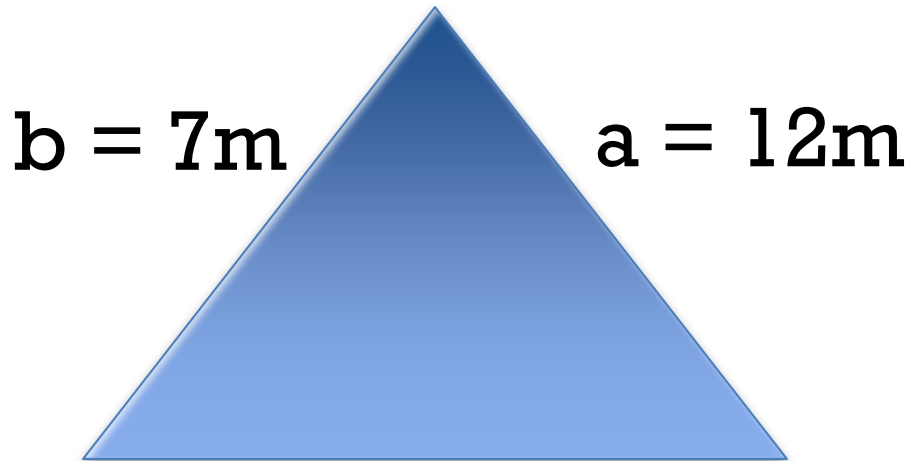

$$l = 8\text{cm}$$

$$\begin{aligned} \therefore P &= 2(8 + 3) \\ &= 22\text{ cm} \end{aligned}$$

# PERIMETER

***Triangle:***

$$P = a + b + c$$

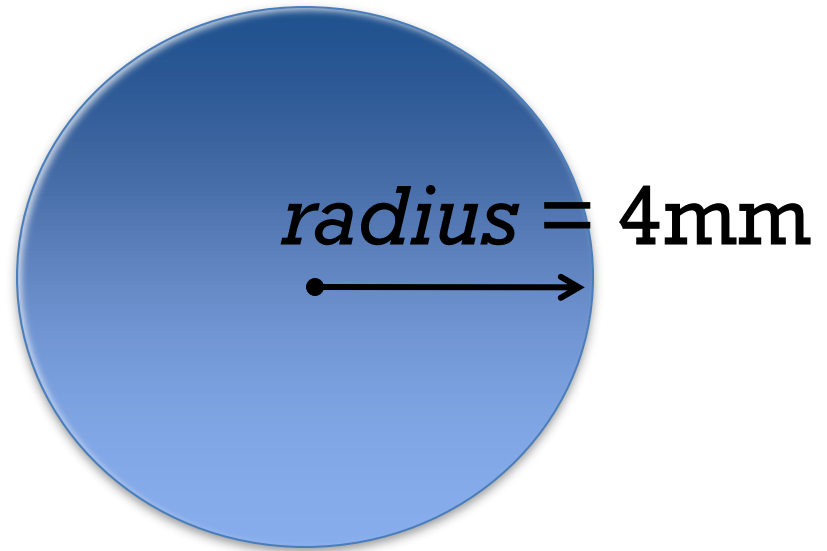

$$C = 19\text{m}$$

$$\begin{aligned} \therefore P &= 7 + 12 + 19 \\ &= 38\text{m} \end{aligned}$$

**Circle:**

$$C = 2\pi r$$

$$\begin{aligned} \therefore C &= 2\pi (4) \\ &= 25.13\text{mm} \end{aligned}$$

# EXERCISE!

1. Determine the perimeter of the shapes:

1.1.

1.2.

# EXERCISE!

# EXERCISE!

2. Solve for  $x$ :

2.1

2.2

$C = 10\text{mm}$

# AREA

Understanding Area

Perimeter & Area of Triangles

Circumference & Area of Circles

# AREA

**Square:**

$$A = (\text{side})^2$$

Side = 6mm

$$\begin{aligned} \therefore A &= (6)^2 \\ &= 36\text{mm}^2 \end{aligned}$$

**Rectangle:**

$$A = l \times b$$

$l = 8\text{cm}$

$b = 3\text{cm}$

$$\begin{aligned} \therefore A &= 8 \times 3 \\ &= 24\text{ cm}^2 \end{aligned}$$

# AREA

**Triangle:**

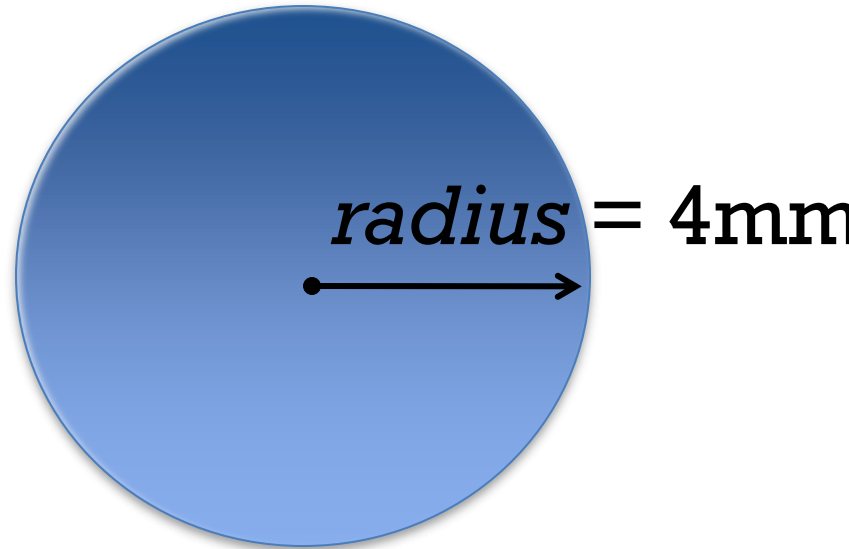

$$A = \frac{1}{2} b \times \perp h$$

$$\begin{aligned} \therefore A &= \frac{1}{2} (12)(5) \\ &= 30\text{m}^2 \end{aligned}$$

**Circle:**

$$A = \pi r^2$$

$$\begin{aligned} \therefore A &= \pi (4)^2 \\ &= 50.27\text{mm} \end{aligned}$$

# EXERCISE!

1. Determine the area of the shapes:

1.1.

1.2.

# EXERCISE!

**2.1. Determine the length of a rectangle given the breadth of 2cm and the area of  $24\text{cm}^2$  .**

**2.2. Determine the diameter of a circle, if the area is  $60\text{mm}^2$**

# PERIMETER & AREA

of

# COMPLEX SHAPES

Perimeter & Area of Complex Shapes

Perimeter & Area of Irregular Shapes

Can shapes with the same area have different perimeters?

# EXERCISE!

1. Determine the perimeter AND area:

1.1.

*2mm*

1.2.

*10mm*

# TOTAL SURFACE AREA

Calculating TSA using nets

Surface Areas of Prisms

Complex Surface Area Examples

# TOTAL SURFACE AREA

**Cube:**

$$\text{TSA} = 6 \times (\text{side})^2$$

$$\begin{aligned} \therefore \text{TSA} &= 6 \times (3)^2 \\ &= 54\text{cm}^2 \end{aligned}$$

# TOTAL SURFACE AREA

**Rectangular prism:**

$$TSA = 2(l \times b) + 2(l \times h) + 2(b \times h)$$

$$\begin{aligned} \therefore TSA &= 2(9 \times 5) + 2(9 \times 3) + 2(5 \times 3) \\ &= 174\text{mm}^2 \end{aligned}$$

# TOTAL SURFACE AREA

**Triangular prism:**

$$TSA = 2\left(\frac{1}{2} \times \perp h\right) + (a \times h) + (b \times H) + (c \times H)$$

$$\begin{aligned} TSA &= 2\left(\frac{1}{2} \times 6 \times 4\right) + (5 \times 4) \\ &\quad + (6 \times 14) + (5 \times 14) \\ &= 248\text{cm}^2 \end{aligned}$$

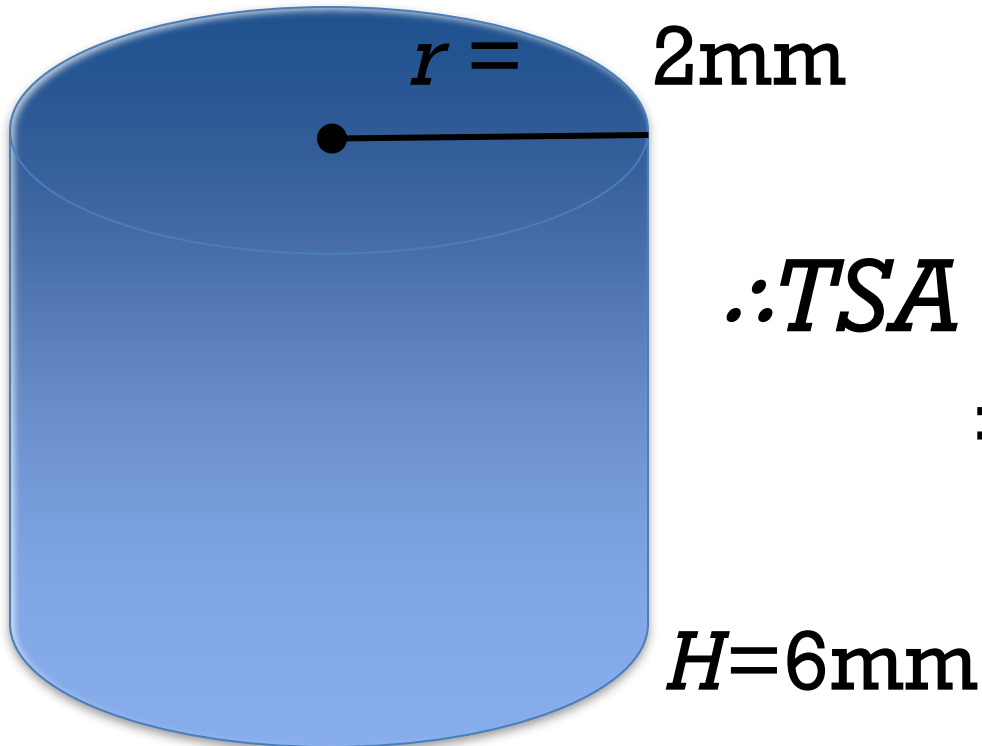

# TOTAL SURFACE AREA

**Cylinder:**

$$TSA = 2\pi r^2 + 2\pi r$$

$$\begin{aligned} \therefore TSA &= \pi r(2) + 2\pi (2)(6) \\ &= 100.53\text{mm}^2 \end{aligned}$$

# EXERCISE!

Find the surface area of the shapes:

1. All sides of a Rubik's cube measure 7cm .

- 2.

7 cm

# EXERCISE!

3

4. The diameter of the tin is 9cm and the height is 5cm

# EXERCISE!

5.

# VOLUME

Volume of a Triangular Prism & Cube

Volume of Prisms

Complex Volume Examples

# VOLUME

**Cube:**

$$V = (\text{side})^3$$

$$\begin{aligned} \therefore V &= (3)^3 & \text{side} &= 3\text{cm} \\ &= 27\text{cm}^3 \end{aligned}$$

# VOLUME

**Rectangular prism:**

$$V = l \times b \times h$$

$$\begin{aligned} \therefore V &= 9 \times 5 \times 3 \\ &= 135\text{mm}^3 \end{aligned}$$

# VOLUME

**Triangular prism:**

$$V = \frac{1}{2} b \times h \times H$$

$$\begin{aligned} V &= \frac{1}{2} \times 6 \times 4 \times 14 \\ &= 168\text{cm}^3 \end{aligned}$$

# VOLUME

**Cylinder:**

$$V = \pi r^2 \times h$$

$r = 2\text{mm}$

$H = 6\text{mm}$

$$\begin{aligned} \therefore V &= \pi(2)^2(6) \\ &= 75.40\text{mm}^3 \end{aligned}$$

# EXERCISE!

Find the volume of the shapes:

1. All sides of a Rubik's cube measure 7cm .

2.

7 cm

# EXERCISE!

3.

4. The diameter of the tin is 9cm and the height is 5cm

# EXERCISE!

5.

# CONVERSIONS

- \* Always make sure that all the dimensions are the same unit
- \* Learn and apply the following conversions:

## Perimeter:

Conversions with  
units of length

# CONVERSIONS

**Area:**

Conversions with  
units of area

Since area is 2D shape, both lengths are converted  $\therefore$  *the scale factor is squared*

# CONVERSIONS

**Volume:**

**1ml=1cm<sup>3</sup>**

Conversions with  
units of volume

# EXERCISE!

1.  $5\text{cm} \rightarrow \text{m}$

2.  $23\text{km} \rightarrow \text{m}$

3.  $16\text{mm}^2 \rightarrow \text{cm}$

4.  $9\text{m}^3 \rightarrow \text{cm}$

5.  $4\text{cm} \rightarrow \text{m}$

6.  $3\text{ml} \rightarrow \text{m}$

7.  $16\text{cm}^3 \rightarrow \text{ml}$

8.  $29\text{m}^2 \rightarrow \text{cm}^2$
