

GRADE 11 INFORMAL TEST 1 ANSWERS

MARK THE TEST
ACCORDING TO THE
MEMO BELOW. THE
ANSWERS ARE
AFTER EACH
QUESTION.

QUESTION 3

3.1 Study the following pattern formed by circles and matches:

Pattern 1

Pattern 2

Pattern 3

Pattern 4

3.1.1 Complete the table by writing down the answer next to the number of the question. (4)

Pattern number	1	2	3	4	5
Number of circles	1	4	9	3.1.1.1	3.1.1.2
Number of matches	4	12	24	3.1.1.3	3.1.1.4

3.1.2 Write down a formula for the number of circles in the n -th pattern. (1)

3.1.3 Determine the general term (T_n) which represents the number of matches in any pattern. (4)

3.1.4 Which pattern will use 1 104 matches? (4)

QUESTION 3

3.1.1.1	16	✓16	(1)
3.1.1.2	25	✓25	(1)
3.1.1.3	40	✓40	(1)
3.1.1.4	60	✓60	(1)
3.1.2	$T_n = n^2$	✓ $T_n = n^2$	(1)

3.1.3

$$\begin{array}{cccccc}
 (a + b + c =) & 4 & 12 & 24 & 40 & 60 \\
 & & \swarrow & \swarrow & \swarrow & \swarrow \\
 (3a + b =) & 8 & 12 & 16 & 20 & \\
 & & \swarrow & \swarrow & \swarrow & \\
 (2a =) & 4 & 4 & 4 & &
 \end{array}$$

$$2a = 4$$

$$a = 2$$

$$3a + b = 8$$

$$3(2) + b = 8$$

$$6 + b = 8$$

$$b = 2$$

$$a + b + c = 4$$

$$2 + 2 + c = 4$$

$$4 + c = 4$$

$$c = 0$$

$$\checkmark a = 2$$

$$\checkmark b = 2$$

$$\checkmark c = 0$$

$$\therefore T_n = 2n^2 + 2n$$

$$\checkmark T_n = 2n^2 + 2n$$

3.1.4

$$2n^2 + 2n = 1\,104$$

$$2n^2 + 2n - 1\,104 = 0$$

$$n^2 + n - 552 = 0$$

$$(n - 23)(n + 24) = 0$$

$$n = 23 \text{ or } n \neq -24$$

NA

$$T_{23} = 1\,104$$

$$\checkmark T_n = 1\,104$$

✓ Standard form

✓ Factors or using of quadratic formula

✓ Choose $n = 23$

(4)

3.2 Calculate: $\frac{3}{2} \times \frac{4}{3} \times \frac{5}{4} \times \dots \times \frac{2009}{2008} \times \frac{2010}{2009}$. (2)

3.3 Study the following pattern:

GRADE11GRADE11GRADE11GRADE11.....

Which letter or number will be the 388th term in the pattern? (2)

[17]

3.2	$\frac{3}{2} \times \frac{4}{3} \times \frac{5}{4} \times \dots \times \frac{2009}{2008} \times \frac{2010}{2009}$ $= \frac{1}{2} \times \frac{2010}{1}$ $= 1005$	<p>✓ Simplify</p> <p>✓ 1005</p>	(2)
3.3	<p>Given pattern: GRADE11GRADE11GRADE11.....</p> <p><i>GRADE11</i> = 7 letters and numbers</p> <p>$\frac{388}{7} = 55$ with a remainder of 3</p> <p>This means that we will have 55 <i>GRADE11</i> parts.</p> <p>Counting 3 letters onwards gives an <i>A</i>.</p> <p>∴ 388th term is a <i>A</i>. Answer only: full marks</p>	<p>✓ Method</p> <p>✓ <i>A</i> (answer)</p>	(2)

QUESTION 6

6.1 The diagram below represents the graph of $f(x) = \frac{p}{x-2} + 4$.

$A(3 ; 7)$ is a point on the graph of f .

- 6.1.1 Write down the equations of the asymptotes of f . (2)
- 6.1.2 Show that $p = 3$. (2)
- 6.1.3 Determine the equation of h which is formed when f is shifted three units downwards and one unit to the left. (2)
- 6.1.4 For which value(s) of x is f decreasing? (2)

QUESTION 6

6.1.1	$x = 2$ $y = 4$	$\checkmark x = 2$ $\checkmark y = 4$	(2)
6.1.2	$(3 ; 7) \quad \therefore 7 = \frac{p}{3 - 2} + 4$ $7 = p + 4$ $p = 3$	\checkmark Substitute $x = 3$ and $y = 7$ \checkmark Simplify	(2)
6.1.3	$h(x) = \frac{3}{x - 2 + 1} + 4 - 3$ $h(x) = \frac{3}{x-1} + 1$	$\checkmark \frac{3}{x-1}$ $\checkmark +1$	(2)
6.1.4	For $x \in \mathbb{R} ; x \neq 2$	$\checkmark x \in \mathbb{R}$ $\checkmark x \neq 2$	(2)

6.2 The diagram shows the graph of $f(x) = a^x$.

The point $A(-2; 4)$ lies on the graph. C is the y -intercept of f .

Determine:

6.2.1 the value of a . (2)

6.2.2 the coordinates of C . (2)

6.2.3 the average gradient of the curve between the points A and C . (3)

[15]

6.2.1	$4 = a^{-2}$ $\left(\frac{1}{2}\right)^{-2} = a^{-2}$ $\therefore a = \frac{1}{2}$	✓ Method ✓ $a = \frac{1}{2}$	(2)
6.2.2	$C(0; 1)$	✓ $x = 0$ ✓ $y = 1$	(2)
6.2.3	$A(-2; 4)$ and $C(0; 1)$ Average gradient = $\frac{y_2 - y_1}{x_2 - x_1}$ Average gradient = $\frac{1 - 4}{0 - (-2)}$ Average gradient = $\frac{-3}{2}$	✓ Correct formula ✓ Substitute correctly ✓ $\frac{-3}{2}$	(3)

[15]
