

Revision Ex. Pg. 105 (No. 5)

a.) Calculate x , y and z .

Calculate x

$$17^2 = 8^2 + x^2 \quad Pythag$$

$$289 = 64 + x^2$$

$$289 - 64 = x^2$$

$$225 = x^2$$

$$15 = x$$

Calculate y

$$y^2 = 12^2 + 16^2 \quad Pythag$$

$$y^2 = 144 + 256$$

$$y^2 = 400$$

$$y = 20$$

Calculate z

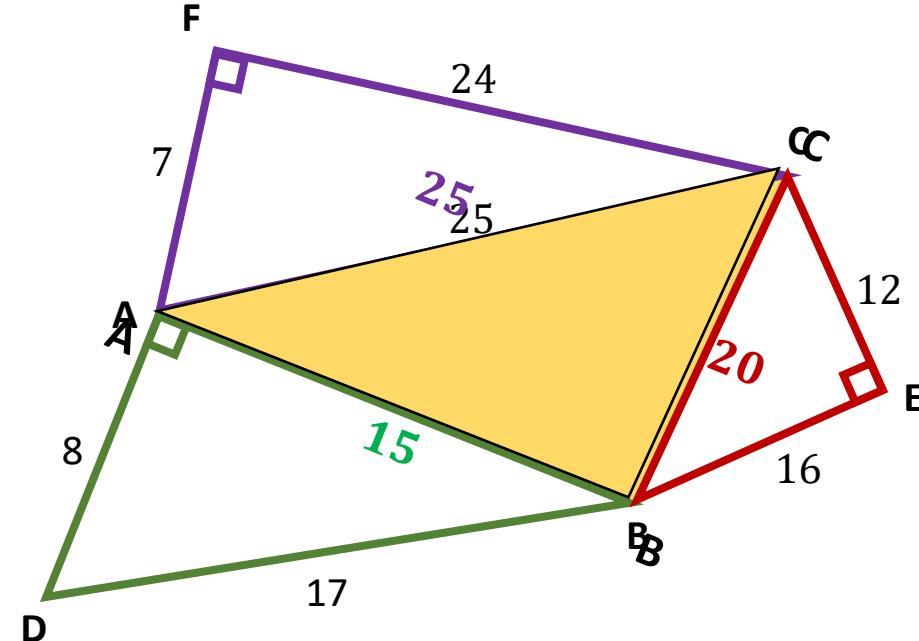

$$z^2 = 7^2 + 24^2 \quad Pythag$$

$$z^2 = 49 + 576$$

$$z^2 = 625$$

$$z = 25$$

Revision Ex. Pg. 105 (No. 5)

b.) Classify ΔABC

All sides are different lengths \therefore Scalene Triangle

Is it right angled? Is $\text{side}^2 + \text{side}^2 = \text{Hypotenuse}^2$

$$20^2 + 15^2 = 25^2$$

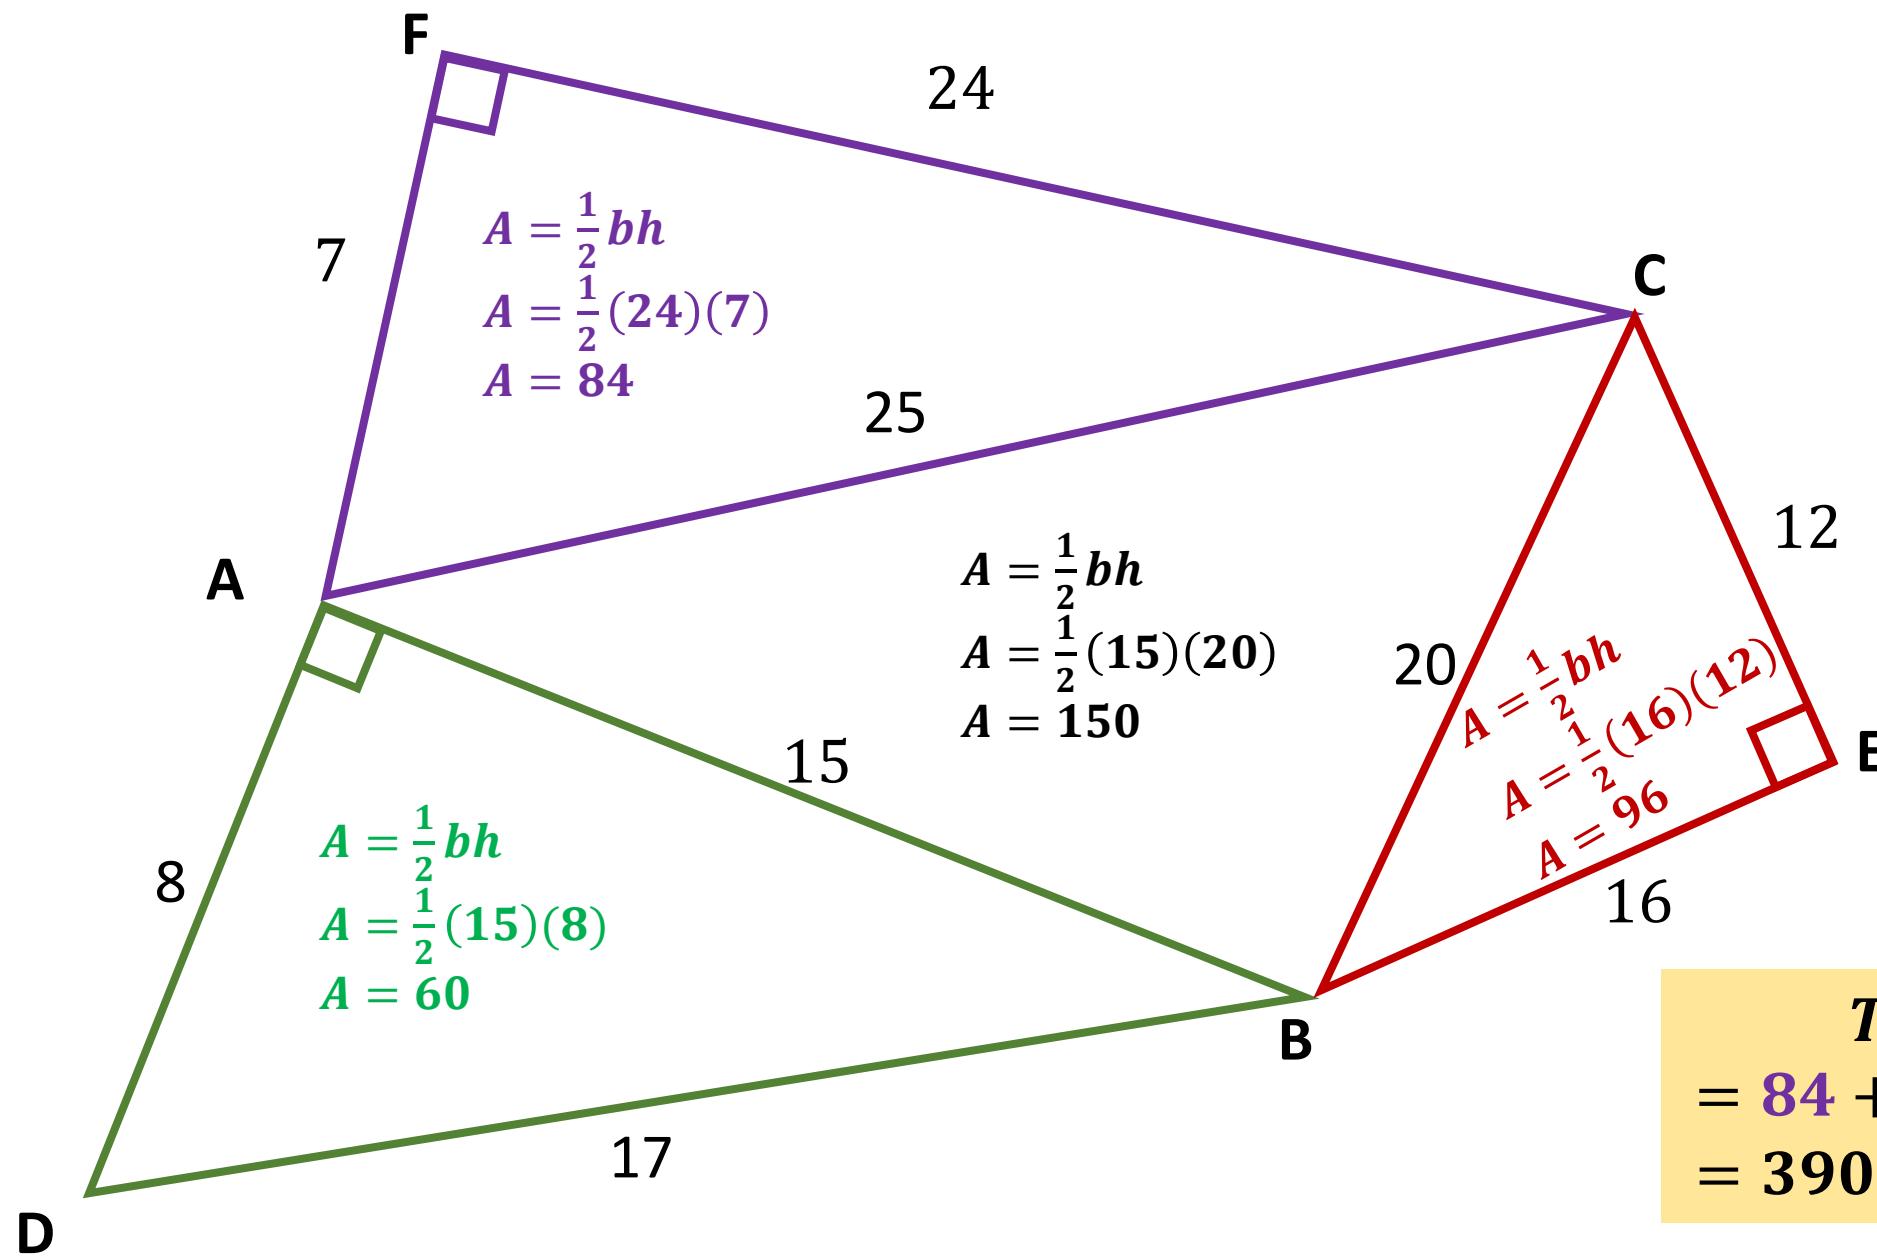

$$400 + 225 = 625$$

$$625 = 625$$

\therefore Right-Angled Scalene Triangle

Revision Ex. Pg. 105 (No. 5)

5c.) Calculate the area

TOTAL AREA
 $= 84 + 60 + 150 + 96$
 $= 390 \text{ units}^2$
